CHEMICO-BIOLOGICAL INTERACTIONS

SUBJECT INDEX

VOLUME 80 (1991)

Autoxidation, hydroquinone, benzoquinone, superoxide dismutase, kinetics, induction period, 159

B16 melanoma, strychnopentamine, dimeric indole alkaloid, non-cancer fibroblasts, cytotoxicity, 203
1,2,4-Benzenetriol, heme, hydroquinone, oxygen radicals, thiobarbituric acid reactive products, 339
Benzoquinone, hydroquinone, superoxide dismutase, autoxidation, kinetics, induction period, 159
bis-Dihydrodiols, dibenzanthracenes, metabolism, 261
Butadiene, epoxybutene, hemoglobin adducts, mercapturic acids, rats, 291
Butylated hydroxyanisole, carcinogenicity, mechanism, reactive oxygen species, DNA adducts, 109

Carcinogenesis, hydrazine oxidation, hydroxy-2'-deoxyguanine, hydroxyl radical, 57
Carcinogenicity, butylated hydroxyanisole, mechanism, reactive oxygen species, DNA adducts, 109
Carcinogenicity, singlet oxygen, photosensitization, genotoxicity, DNA damage, mutagenicity, 239
Cell cycle specificity, pregnane derivative, α,β-unsaturated carbonyl, Michael addition, mechanism of action, DNA, RNA and protein biosynthesis, cytotoxic and mutagenic potentials, 43
Cultured cells, oxidative stress, cytoskeleton, 217
Cytoskeleton, oxidative stress, cultured cells, 217
Cytotoxicity, quinones, hepatocytes, redox cycling, oxidative stress, 1
Cytotoxicity, strychnopentamine, dimeric indole alkaloid, B16 melanoma, non-cancer fibroblasts, 203
Cytotoxic and mutagenic potentials, pregnane derivative, α,β-unsaturated carbonyl, Michael addition, mechanism of action, DNA, RNA and protein biosynthesis, cell cycle specificity, 43

Dibenzanthracenes, metabolism, bis-dihydrodiols, 261
1,3-Dichloropropanol, mechanisms for mutagenicity and genotoxicity, epichlorohydrin formation, 73
Dimeric indole alkaloid, strychnopentamine, B16 melanoma, non-cancer fibroblasts, cytotoxicity, 203
Diol-epoxides, ^{32}P-postlabeling, DNA adducts, V79 cell, polycyclic aromatic hydrocarbons, 177
DNA, RNA and protein biosynthesis, pregnane derivative, α,β-unsaturated carbonyl, Michael addition, mechanism of action, cytotoxic and mutagenic potentials, cell cycle specificity, 43
DNA-binding protein, heavy metal, metallothionein, metal responsive element, mobility shift assay, 145
DNA adduct, N7-(2-hydroxyethyl)guanine, ethylene oxide, HPLC with electrochemical detection, 281
DNA adducts, butylated hydroxyanisole, carcinogenicity, mechanism, reactive oxygen species, 109
DNA adducts, postlabeling, 1,N^6-ethenoadenine, 3,N^4-ethenocytosine, 1,N^2-ethenoguanine, T4 polynucelotide kinase, 99
DNA adducts, ^{32}P-postlabeling, V79 cell, diol-epoxides, polycyclic aromatic hydrocarbons, 177
DNA damage, singlet oxygen, photosensitization, genotoxicity, mutagenicity, carcinogenicity, 239
DT-Diaphorase, indole-3-carbinol (acid condensation products of), hepatocytes, *P*-450, 303

Effect of thiols, nitropropane, nitronate decomposition, equilibrium, 187
English sole, nitrofurantoin, oxidative DNA damage, 8-hydroxy-2′-deoxyguanosine, 317
Epichlorohydrin formation, 1,3-dichloropropanol, mechanisms for mutagenicity and genotoxicity, 73
Epoxybutene, butadiene, hemoglobin adducts, mercapturic acids, rats, 291
Equilibrium, nitropropane, nitronate decomposition, effect of thiols, 187
1,N^6-Ethenoadenine, postlabeling, 3,N^4-ethenocytosine, 1,N^2-ethenoguanine, DNA adducts, T4 polynucelotide kinase, 99
3,N^4-Ethenocytosine, postlabeling, 1,N^6-ethenoadenine, 1,N^2-ethenoguanine, DNA adducts, T4 polynucelotide kinase, 99
1,N^2-Ethenoguanine, postlabeling, 1,N^6-ethenoadenine, 3,N^4-ethenocytosine, DNA adducts, T4 polynucelotide kinase, 99
Ethylene oxide, N7-(2-hydroxyethyl)guanine, DNA adduct, HPLC with electrochemical detection, 281

Genotoxicity, singlet oxygen, photosensitization, DNA damage, mutagenicity, carcinogenicity, 239
Glutathione, mice, oral GSH supplementation, tissue GSH, 89

Heavy metal, metallothionein, metal responsive element, DNA-binding protein, mobility shift assay, 145
Heme, hydroquinone, 1,2,4-benzenetriol, oxygen radicals, thiobarbituric acid reactive products, 339
Hemoglobin adducts, butadiene, epoxybutene, mercapturic acids, rats, 291
Hepatocytes, indole-3-carbinol (acid condensation products of), *P*-450, DT-diaphorase, 303
Hepatocytes, quinones, redox cycling, oxidative stress, cytotoxicity, 1
HPLC with electrochemical detection, N7-(2-hydroxyethyl)guanine, DNA adduct, ethylene oxide, 281
Hydrazine oxidation, 8-hydroxy-2′-deoxyguanine, carcinogenesis, hydroxyl radical, 57
Hydroquinone, benzoquinone, superoxide dismutase, autoxidation, kinetics, induction period, 159
Hydroquinone, heme, 1,2,4-benzenetriol, oxygen radicals, thiobarbituric acid reactive products, 339
8-Hydroxy-2′-deoxyguanine, hydrazine oxidation, carcinogenesis, hydroxyl radical, 57
8-Hydroxy-2′-deoxyguanosine, English sole, nitrofurantoin, oxidative DNA damage, 317
N7-(2-Hydroxyethyl)guanine, DNA adduct, ethylene oxide, HPLC with electrochemical detection, 281
Hydroxyl radical, hydrazine oxidation, 8-hydroxy-2′-deoxyguanine, carcinogenesis, 57

Indole-3-carbinol (acid condensation products of), hepatocytes, *P*-450, DT-diaphorase, 303
Induction period, hydroquinone, benzoquinone, superoxide dismutase, autoxidation, kinetics, 159

Kinetics, hydroquinone, benzoquinone, superoxide dismutase, autoxidation, induction period, 159

Liver and intestinal microsomes, oxidants, peroxidation, 135

Mechanism, butylated hydroxyanisole, carcinogenicity, reactive oxygen species, DNA adducts, 109
Mechanisms for mutagenicity and genotoxicity, 1,3-dichloropropanol, epichlorohydrin formation, 73
Mechanism of action, pregnane derivative, α,β-unsaturated carbonyl, Michael addition, DNA, RNA and protein biosynthesis, cytotoxic and mutagenic potentials, cell cycle specificity, 43
Mercapturic acids, butadiene, epoxybutene, hemoglobin adducts, rats, 291
Metabolism, dibenzanthracenes, bis-dihydrodiols, 261
Metallothionein, heavy metal, metal responsive element, DNA-binding protein, mobility shift assay, 145
Metal responsive element, heavy metal, metallothionein, DNA-binding protein, mobility shift assay, 145
Mice, glutathione, oral GSH supplementation, tissue GSH, 89
Michael addition, pregnane derivative, α,β-unsaturated carbonyl, mechanism of action, DNA, RNA and protein biosynthesis, cytotoxic and mutagenic potentials, cell cycle specificity, 43
Mobility shift assay, heavy metal, metallothionein, metal responsive element, DNA-binding protein, 145

Monocyte carboxylesterase, organophosphorus compounds, triphenyl phosphate, 327
Mutagenicity, singlet oxygen, photosensitization, genotoxicity, DNA damage, carcinogenicity, 239

Nitrofurantoin, English sole, oxidative DNA damage, 8-hydroxy-2′-deoxyguanosine, 317
Nitronate decomposition, nitropropane, equilibrium, effect of thiols, 187
Nitropropane, nitronate decomposition, equilibrium, effect of thiols, 187
Non-cancer fibroblasts, strychnopentamine, dimeric indole alkaloid, B16 melanoma, cytotoxicity, 203

Oral GSH supplementation, glutathione, mice, tissue GSH, 89
Organophosphorus compounds, monocyte carboxylesterase, triphenyl phosphate, 327
Oxidants, peroxidation, liver and intestinal microsomes, 135
Oxidative DNA damage, English sole, nitrofurantoin, 8-hydroxy-2′-deoxyguanosine, 317
Oxidative stress, cytoskeleton, cultured cells, 217
Oxidative stress, quinones, hepatocytes, redox cycling, cytotoxicity, 1
Oxygen radicals, heme, hydroquinone, 1,2,4-benzenetriol, thiobarbituric acid reactive products, 339

P-450, indole-3-carbinol (acid condensation products of), hepatocytes, DT-diaphorase, 303
Peroxidation, oxidants, liver and intestinal microsomes, 135
Photosensitization, singlet oxygen, genotoxicity, DNA damage, mutagenicity, carcinogenicity, 239
Polycyclic aromatic hydrocarbons, ^{32}P-postlabeling, DNA adducts, V79 cell, diol-epoxides, 177
Postlabeling, 1,N^6-ethenoadenine, 3,N^4-ethenocytosine, 1,N^2-ethenoguanine, DNA adducts, T4 polynucelotide kinase, 99
^{32}P-Postlabeling, DNA adducts, V79 cell, diol-epoxides, polycyclic aromatic hydrocarbons, 177
Pregnane derivative, α,β-unsaturated carbonyl, Michael addition, mechanism of action, DNA, RNA and protein biosynthesis, cytotoxic and mutagenic potentials, cell cycle specificity, 43

Quinones, hepatocytes, redox cycling, oxidative stress, cytotoxicity, 1

Rats, butadiene, epoxybutene, hemoglobin adducts, mercapturic acids, 291
Reactive oxygen species, butylated hydroxyanisole, carcinogenicity, mechanism, DNA adducts, 109
Redox cycling, quinones, hepatocytes, oxidative stress, cytotoxicity, 1

Singlet oxygen, photosensitization, genotoxicity, DNA damage, mutagenicity, carcinogenicity, 239
Strychnopentamine, dimeric indole alkaloid, B16 melanoma, non-cancer fibroblasts, cytotoxicity, 203
Superoxide dismutase, hydroquinone, benzoquinone, autoxidation, kinetics, induction period, 159

T4 polynucelotide kinase, postlabeling, 1,N^6-ethenoadenine, 3,N^4-ethenocytosine, 1,N^2-ethenoguanine, DNA adducts, 99
Thiobarbituric acid reactive products, heme, hydroquinone, 1,2,4-benzenetriol, oxygen radicals, 339
Tissue GSH, glutathione, mice, oral GSH supplementation, 89
Triphenyl phosphate, monocyte carboxylesterase, organophosphorus compounds, 327

α,β-Unsaturated carbonyl, pregnane derivative, Michael addition, mechanism of action, DNA, RNA and protein biosynthesis, cytotoxic and mutagenic potentials, cell cycle specificity, 43

V79 cell, ^{32}P-postlabeling, DNA adducts, diol-epoxides, polycyclic aromatic hydrocarbons, 177
